

Three-Axis System HS3

The HIWIN three-axis system HS3 is a flexible unit for positioning in X, Y and Z directions. The base in the X-axis is built with a double axis HD. A linear table HT-B with toothed belt drive ensures dynamic movement in the Y direction. The HC cantilever axis with a particularly light cantilever guarantees quick and precise positioning in the Z direction. HIWIN three-axis systems are especially suitable for movement tasks in three-dimensional space.

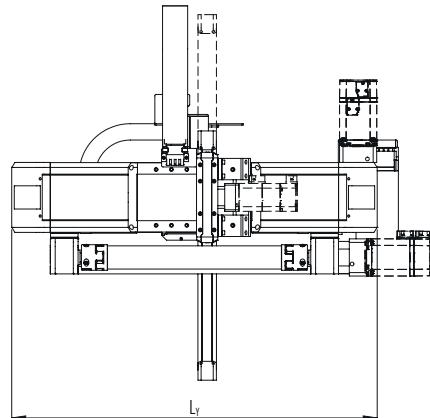

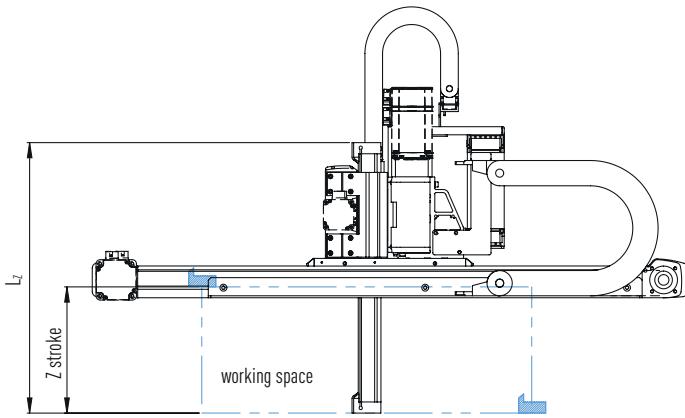

Overview of your advantages:

- Stroke in all three axes is selectable in millimetre steps
- Flexible connecting options for all typical motors
- Optional with energy chain in X, Y and Z direction
- Complete system is ready to install
